crauciuc.costin@yahoo.com

Web developer at the beginning of the journey, oriented towards solving problems in the most efficient way, using high-performance technologies to deliver high-quality software products. I worked with languages such as HTML, SCSS, Javascript and with React library to create various websites. Out of my desire to understand the overall picture of web development, I build an ecommerce store where I used more technologies such as Node.js, Express and MongoDB. This project matured me a little and helped me acquire valuable knowledge to create even more powerful web applications.

My goal is that one day I will have the necessary experience and knowledge to build a large and complex application from start to finish. But, until then, I want to accumulate as much quality information as possible, to grow professionally and to bring value to the environment and the project I am part of.
